Smarter Logistics: Visibility & Insight

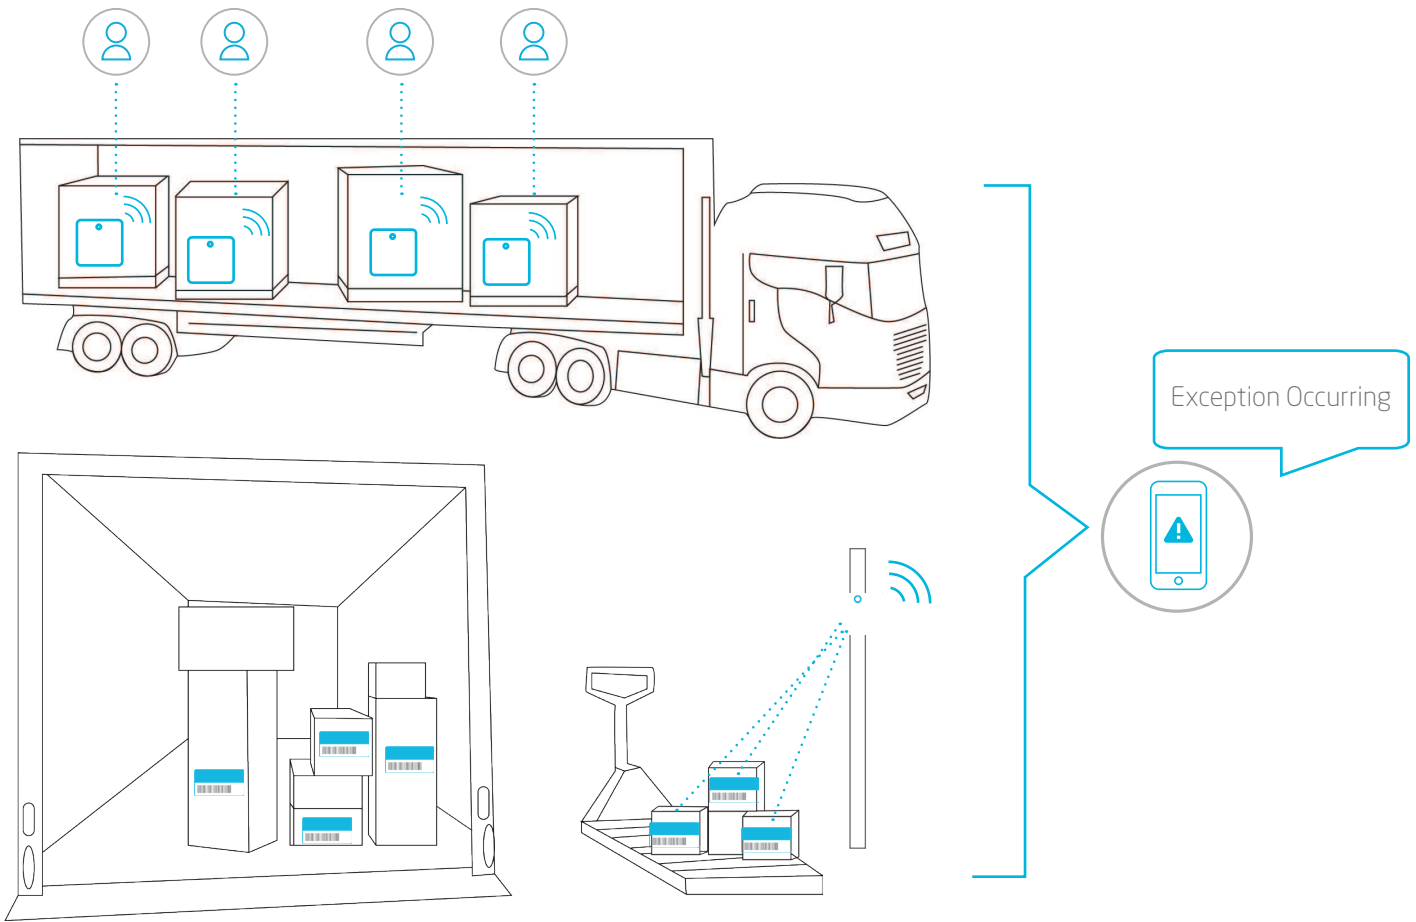

Creating A More Resilient Supply Chain

Whether you are the shipper, carrier or receiver, real-time end-to-end visibility enables quick responses and adaptations to the conditions at hand.

A supply chain with embedded IoT technology provides an extra layer of security that lets you locate on demand and be alerted of deviations. With access to this critical in-transit data and insight, supply chain managers will save costs from streamlined processes and reduce the risk of potential theft.

Honing Supply Chain Operations with Greater Visibility Insights.

Supply Chain Visibility & Risk Management

/Delivery Reporting

Access shipment information that offers geospatial pairing to delivery location and tracking device for confirmation down to the pallet and package level available to the recipient.

/Real-Time Alert Notifications

Learn quickly about exceptions and other operational information such as bad location types, distance from origin and dwell time.

/Dashboard & Command Center

Enable clear chain of custody and control in an easy-to-use, web-based dashboard and work with our 24/7 command center.

/Supply Chain Optimization

Use real-time and historical data to find trends and evaluate performance of modes, routes and carriers.

Resilient Supply Chains Require Real-Time Data

Shipment Monitoring

Gain supply chain visibility in real time, for addressing quality, compliance and security. Eliminate tracking blind spots regardless of mode or carrier.

Supply Chain Optimization

Use integration and supporting data services to create a secure and comprehensive view of all shipping information, such as electronic shipment information, electronic shipment surety and streaming shipment information.

Chain of Custody & Control

Document a comprehensive chronological history who handled a shipment and when for a proper chain of custody and control throughout the entire journey. Adhere to industry standards and government regulatory compliance.

Risk Management

Be sure that materials are not stolen, adulterated or diverted with real-time alert notifications for intervention and prevention. Recover stolen goods faster with a direct tie-in to a law-enforcement database that has the shipment's last known location.

Smarter Ecosystems for Visibility, Require Smart Architecture

CalAmp's Asset Management, Visibility and Theft Prevention Solutions

Use IoT technology to monitor and manage your supply chain.

- Track and report on activity and compliance
- Trigger route deviations, long dwell times and other alert notifications
- Document digitally the entire chain of custody and control across modes and carriers

Sensors & Gateways

Remote data logging and communication of environmental conditions with smart sensor and telematics gateway full-stack solution

Monitoring Platform

Monitor in real-time and reduce labor-intensive processes by using the proprietary command portal

Command Center

Access to fully-staffed 24/7 command center with professional, experienced and specialized consultants

About CalAmp

CalAmp (NASDAQ: CAMP) is a telematics pioneer leading transformation in a global connected economy. We help reinvent businesses and improve lives around the globe with technology solutions that streamline complex IoT deployments and bring intelligence to the edge. Our software applications, scalable cloud services, and intelligent devices collect and assess business-critical data from mobile assets, cargo, companies, cities and people. We call this The New How, powering autonomous IoT interaction, facilitating efficient decision making, optimizing resource utilization, and improving road safety. CalAmp is headquartered in Irvine, California and has been publicly traded since 1983. Lojack is a wholly owned subsidiary of CalAmp. For more information, visit calamp.com, or LinkedIn, Twitter, YouTube or CalAmp Blog.
